

DATA UPLOAD-EXPORT TABS

Data Uploads:

- Simply drag the grower / farm / field into the account window and go through the upload setup configuration.
- Many data / configuration types available (boundaries, soil data, shape files, .csv files, yield data, as-applied, as-planted, Veris, etc.).
- If large uploads, you can set it up to be emailed when uploads are completed.
- All uploads performed in the background so you can still work in the program while the upload takes place.

Data Exports:

- Simply drag the grower / farm / field into the account window and go through the upload setup configuration.
- Many data / configuration types available (boundaries, soil data, shape files, .csv files, yield data, as-applied, as-planted, Veris, etc.).
- Export as lbs/ac or ppm.
- The export process is very efficient. Export large amounts of data in seconds or minutes.
- All exports performed in the background, so you can still work in the program while the export takes place.
- Exported files will reside in the File Manager.
